

Group Management

Maximise your pharmacy profits

Group Management enhances the Nexphase application in busy pharmacy groups and facilitates the extraction and analysis of business data (not patient data) from the branches of your Pharmacy chain. The data can then be used to ensure that your business is maximising its profit margin.

This business resource allows the head offices of pharmacy chains to manage their branches remotely. Group Management allows you to deliver reports that are generated from the collection of data which is held centrally, this can then be viewed by individual branches or at group level. Ultimately relieving the pharmacist from business administration and freeing his time to serve patients.

Group Management encourages you to run your own business in your own style

Most pharmacy chains have defined policies relating to specific drugs to dispense, endorse and order. This can now be set centrally and in addition, specific drugs suppliers can be set by you to automatically or manually send to the branches each night. This facility allows you quicker application of changes to drug restrictions or supplier defaults.

Total flexibility to manage your business

You will need the Internet to access the Group Management application which then connects to Cegedim Rx's secure server. Easy access is gained from any Internet broadband location for example your office, at home, or at any internet access point. Internet access allows you total flexibility in managing your business.
