

Nexphase

Nexphase is rapidly becoming established as one of the most advanced PMR systems available on the market today, with extensive functionality which enables pharmacists to meet the requirements of the new contract today. Nexphase is ETP ready and was one of the first PMR systems to achieve clinical authority to deploy the solution. This allows the pharmacist and patients to benefit immediately from the electronic prescription service. These benefits include increased safety, more choice and convenience for patients, better information for prescribers and dispensers and a reduced administrative cost across the pharmacy related business.

Major development has been invested in the Nexphase product to improve the performance of the solution, which is now being recognised by major organisations who have chosen Nexphase as their future PMR solution.

Nexphase is the only PMR software system that offers an on screen prescription, ETP compatibility, eMAS, MUR, Pathfinder, repeat support, and Scriptserve (the repeat prescription collection management service). This means that you no longer need to keep or produce manual paperwork and are automatically compliant with Connecting for Health. The system will also enable you to deliver many of the essential services in the new pharmacy contract, providing an opportunity to generate extra business. Nexphase is a fully flexible PMR System which allows you to dispense, label, order and endorse, park and retrieve in any order you like. Fully configurable, the system will support the way you work and help you to develop efficiencies in your pharmacy.

Nexphase is the only ETP system to show a visual prescription on screen, where you can view the front and back of the prescription. It is also the only system with a patient centred medication record which provides pharmacists with patient compliance check at a glance. The detail of patient medication history also appears alongside of the script. This makes it very easy for the pharmacist to identify and deal with compliance counselling and professional issues.

The Nexphase system is cleverly designed to minimise user training and features a clear, simple presentation. Options are always available at the touch of a button but do not obscure important information shown on the screen. Alongside the standard PMR functionality Nexphase also features a graphical view of patient compliance history. Clinical information such as warnings, counselling information and interactions are all clearly displayed to support rapid, but informed, decision making.

Nexphase allows you to implement Medicine Use Review Reports (MUR) which is the first advanced service within the new community pharmacy contract. You can automatically produce, print and save MURs which fully integrates with the patient's history and builds a comprehensive account of their interaction with your pharmacy.

Nexphase Features

General

- Windows® power and flexibility
- Easy to use with a mouse or a keyboard
- Multi-user networked systems available
- Data conversions from other major PMR systems
- Bi-annual program updates
- Electronic data updates
- Fast and reliable database
